New York Affordable Reliable Electricity Alliance Praises License Renewal for Indian Point

New York, NY/September 17, 2018 – In response to the announcement today by the U.S. Nuclear Regulatory Commission (NRC) that the operating licenses for Indian Point Units 2 and 3 have been renewed for the remainder of their operating cycles, New York Affordable Electricity Alliance Chairman Arthur “Jerry” Kremer issued the following statement.

“We applaud today's decision by the NRC to relicense Indian Point, ensuring that New Yorkers can continue to benefit from the 2,000 megawatts of power it produces until its planned closure by 2021. This allows the state to make progress on its future power portfolio with confidence about this plant's continued safe operations. Today's decision by the NRC would not be possible without the dedicated work of the men and women who operate the plant safely every day and who have maintained a stellar safety record year after year.”
